

FARM MANAGEMENT SYSTEM

1. BRAINSTORMING&IDEATION

1.1 Problem Identification

Farm management involves maintaining information about farmers, farms, crops, production, buyers and sales. Managing these details manually using notebooks, registers and separate files can make it difficult to maintain accurate records and monitor farm activities. The Farm Management System provides a centralized platform to store and manage agricultural information efficiently.

1.2 Problem Statements

ID	Target User	Problem Statement
PS-1	Farmer	The farmer needs an easy way to maintain personal, farm and crop details, but manual record keeping can lead to missing or incorrect information.
PS-2	Farm Manager	The Farm Manager needs to monitor farm activities, crop production and sales, but managing information from multiple records can be time-consuming.
PS-3	Buyer	The buyer needs information about available crops and their details, but obtaining updated information manually can be difficult.
PS-4	System Administrator	The System Administrator needs to manage users and agricultural records securely, but manual management

		can make access control difficult.
--	--	------------------------------------

1.3 Target Users

- Farmers
- Farm Managers
- Buyers
- System Administrators

1.4 Empathy Map

Empathy Area	FMS Understanding
Think&Feel	Users want simple, accurate and easily accessible farm information.
Hear	Users receive information and suggestions from farm managers, buyers and agricultural stakeholders.
See	Users maintain farm, crop and sales information and monitor agricultural activities.
Say&Do	Manual work, data errors, missing records and difficulty in preparing reports.
Pain	Data loss, data-entry errors, delays and difficulty preparing reports.
Gain	Centralized records, easy monitoring, faster reporting and better data management.

1.5 User Needs

- Easy management of farmer and farm information.
- Simple recording of crop details.
- Proper monitoring of farm activities.

- Easy management of buyer information.
- Secure access to agricultural records.
- Reports and dashboards for better monitoring.

1.6 Pain Points

- Manual maintenance of farm records.
- Repeated data entry.
- Incorrect or missing information.
- Difficulty tracking crop activities.
- Time-consuming report preparation.
- Difficulty managing user access.

1.7 Selected Idea

The selected idea is a Farm Management System (FMS) developed using Salesforce. The system provides a centralized platform for managing farmer, farm, crop and buyer information. It helps users maintain organized records, control access and view important information through reports and dashboards.

1.8 Objective of the Idea

The main objective of the Farm Management System is to simplify farm data management by reducing manual work and maintaining accurate agricultural records. The system aims to improve farm monitoring, provide secure access to information and support faster decision-making through reports and dashboards.

1.9 Expected Outcome

The proposed Farm Management System is expected to provide centralized and organized agricultural records, reduce manual errors, simplify farm and crop management, improve

monitoring of productivity and sales, and provide useful reports for farmers, farm managers and buyers.
