

FARM MANAGEMENT SYSTEM

6. PROJECT TESTING

6.1 Testing Objective

Testing verifies that the Farm Management System functions according to its requirements. It ensures that farm, farmer, crop, and buyer data are stored correctly and that validation, relationships, security, reports, and dashboards work as expected.

6.2 Test Areas

Test ID	Area	Expected Result	Status
TC-01	Farm Record Creation	Management records can be created with required information.	Tested
TC-02	Crop Record Creation	Required details are stored correctly.	Tested
TC-03	Farmer Record Creation	User information can be created and stored correctly.	Tested
TC-04	Buyer Record Creation	Transaction details can be stored correctly.	Tested
TC-05	Mandatory Field Validation	Required fields prevent incomplete records.	Tested
TC-06	Date Validation	Invalid date entries are controlled.	Tested
TC-07	Quantity Validation	Entered values are checked according to configured rules.	Tested
TC-08	Field Dependency	Related field values respond correctly to the selected option.	Tested
TC-09	Relationship Testing	Related records display connected information correctly.	Tested
TC-10	Security Testing	Configured profiles and roles provide appropriate access.	Tested

TC-11	Sharing Rules	Records are visible/editable according to the sharing rules.	Tested
TC-12	Reports	Records are visible or editable according to sharing rules.	Tested
TC-13	Dashboards	Dashboard components reflect the available report data.	Tested
TC-14	Performance	Queries and reports respond within the expected time.	Checked

6.3 Validation Testing

Validation testing covers mandatory fields, date-related checks, and quantity ranges in the Farm Management System. It ensures that farm, farmer, crop, and buyer records contain valid and complete information before they are saved.

6.4 Security and Access Testing

Security and access testing covers profiles, roles, and sharing rules in the Farm Management System. The system is checked to ensure that Farm Manager and Sales Department users can access and manage farm records according to their configured permissions.

6.5 Analytics Testing

Analytics testing checks whether reports and dashboards correctly display and update information based on the available farmer, farm, crop, and buyer records in the Farm Management System.

6.6 Testing Conclusion

The testing phase covers the core data, validation, relationship, security, and analytics areas of the Farm Management System. The documented test areas provide evidence that the system has been reviewed according to the project requirements.
