

FARM MANAGEMENT SYSTEM

8. PROJECT DEMONSTRATION

8.1 Demonstration Objective

The main objective of the demonstration is to show the working process of the Farm Management System in Salesforce. It demonstrates how users can create and manage farmer, farm, crop and buyer records, connect related information, and view farm-related reports and dashboards. The demonstration helps to show how the system supports efficient digital management of farm activities.

8.2 Demonstration Prerequisites

Before demonstrating the Farm Management System, the following prerequisites should be available:

- Salesforce account with access to the Farm Management System application.
- Required user permissions.
- Farmer, Farm, Crop and Buyer tabs available in the application.
- Reports and Dashboards configured for displaying farm management information.

8.3 Demonstration Steps

Step	Demonstration Activity
Step 1	Open the App Launcher and select the Farm Management System Lightning application.
Step 2	Open the Farmer tab, select New, enter the farmer's contact and location details, and save the record
Step 3	Open the Farm tab, create a farm, enter the Farm Type, Soil Quality and Irrigation Type, and link the farm to the appropriate Farmer.
Step 4	Open the Crop tab and enter Crop Name, Planting Date, Harvest Date, Actual Yield and Total Acres Harvested. The system calculates the Expected Yield per Acre using the configured formula.
Step 5	Open the Buyer tab and enter buyer contact information, address and Buyer Type such as Wholesale or Retail.
Step 6	Open Reports and display reports containing Farmer, Farm, Crop and Buyer information
Step 7	Open Dashboards and display the Farmers with Farms dashboard and visual farm management statistics.

8.4 Expected Demonstration Result

The demonstration should show that users can successfully create and manage the main records of the Farm Management System. The system should allow users to connect Farmer, Farm, Crop and Buyer information, apply the configured data rules, display calculated crop information, and access reports and dashboards for effective farm management.

8.5 Final Demonstration Checklist

The following checklist is used to verify the successful demonstration of the Farm Management System:

- Application opens successfully.
- Farmer record can be created.
- Farm record can be linked to a Farmer.
- Crop record can be linked to a Farm.
- Expected Yield per Acre calculation is displayed.
- Buyer record can be created.
- Reports display farm management information.
- Dashboards display farm management analytics.
- Access permissions work according to the configured settings.

8.6 Demonstration Conclusion

The final demonstration presents the complete functional flow of the Farm Management System. It shows how Salesforce objects, relationships, validation rules, calculated information, reports and dashboards work together to support efficient digital farm management. The demonstration confirms that the system can manage important farm-related information in an organized manner.
